Jim Judge

Etime Energy

Jim I would like to take this opportunity to comment on how the new window coating has impacted our Restaurant.

Our window frontage faces south east and has sun on the windows from dawn to restaurant closing in all seasons. This summer has been unusually hot and before the coating was applied we basically had to have our window blinds pulled down in order to effectively use the seating area at the front of our restaurant. Despite the blinds being pulled the heat in the area had customers asking to move further back in the restaurant. This seating area represents 32 seats.

Since the install July 1st we have been able to leave the blinds up all day and allow light into the rest of the restaurant. Previously clients were hesitant to sit near the windows due to the glare and heat in the area. They currently ask to be seated up front. Staff have remarked that it is more comfortable working at this station.

Your installers were professional and did not inconvenience our operation in any way. The coating application is uniquely clear, while very effective at reducing glare from outside into the restaurant. I am looking forward to the financial benefits being realised due to a lighter load on our air conditioning.

Thank you for introducing us to this new Technology
